

RESEARCH STUDY

To test the **effectiveness of Biopro EMF Harmoniser Chips**
on the **STRESS RESPONSE** triggered by
Electromagnetic Emissions from a **CELL PHONE**

Study Location	Auckland, New Zealand
Date	8 and 9 October 2005
Medical Researcher	Dr. D. Taylor
Testing Equipment	BioMeridian MSAS Professional (FDA registered, ISO certified)

STUDY PURPOSE

To test the weakening and / or compensation of electromagnetic cell phone radiation (EMFs) on 7 key body (energy) systems when using BIOPRO EMF Harmoniser chip technology with the available series of measurements and testing devices.

1. Introduction

The suspicion that the **influence of electromagnetic waves** and fields emitted by televisions, radios, microwaves ovens, computers, cell phones, etc. have a **negative, lasting impact on the human health system**, has become – with an increasing number of world-wide studies – a certainty. **Many so-called modern illnesses** of today's civilisation (in particular allergies) seem to be released and / or **exaggerated by these electromagnetic influences**.

According to the ARNDT-SCHULTZ-RULE, it is the **weak and small doses** that **have particularly strong influences** in their effect on biological systems, releasing clearly measurable reactions. **After an accumulation of negative influences** in the course of months or years, pre-pathological and ultimately **pathological reactions can be observed** and changes may occur in the human organism.

The rule applied to determine in tests,

- Whether and which causal influences have a changing effect on humans when exposed to the range of EMF-radiating technologies, and
- Which substantiating testing methods can be used when evaluating human energy systems, and are they suitable to show the qualitative and quantitative effects of such technical influences (i.e. EMFs).

Many functional or energy medical devices, such as the BioMeridian MSAS Professional testing device used in this study are assessed on the research of Dr. Reinhold Voll. Dr. Voll established that there is a network of energy channels, called meridians, flowing through the body. Meridian points, some of which correlate to acupuncture points, can be used to collect energetic data. Dr. Voll demonstrated that the body's organs are associated with different

energy meridians. Imbalances in various organs are believed to manifest themselves as energetic disturbances in the associated meridians. These energetic meridians are also highly responsive to external stressors, almost immediately. This study will take advantage of this fact.

As sufficiently sensitive and reactive measuring points, 7 acupuncture systems with its meridians and points were chosen.

The points chosen were:

- Lymphatic system
- Lung
- Large Intestine
- Nervous System
- Circulation
- Allergy Response
- Cellular Metabolism

These points represent the condition of the entire human energy system and, within seconds, reflect physical reactions to the biophysical attractions (assuming these affect the body in a noticeable manner). Also, the body's compensatory reactions through homeostasis can immediately be measured and evaluated through these points.

2. Material and Methods

The BioMeridian MSAS Professional (an FDA registered and ISO certified device) which measures stress in over 60 different parts of the human body was used as the measuring device. It is currently used by over 2,000 health practitioners in the U.S., Europe, Canada, Australasia and many other parts of the world. This system is an important indicator of resistance to stress in essential bio-systems throughout the body.

In each of the 7 key body areas the test-subjects were measured on a data output scale of 0-100. The ideal target zone falls within the 45-55 score range.

Practitioners say that any measurement above 55 is stressful as it indicates excess energy, or an inflamed condition in that part of the human biofield. Any measurement below 45 is also stressful because lower numbers represent impaired, weakened, or blocked energy systems. The closer an individual's measurements are to 50, the closer he/she is to actually being in his/her ideal performance zone.

The individual screenings show the Meridian changes that took place in relation with exposure to the product being screened. A Nokia dual-band cell phone was used for testing. The phone equipped with the BIOPRO chip had one chip attached to the back, approximately 2 cm below the antenna.

The following groups of 17 individuals were involved in the test - 11 Woman, 6 Men

The measurement schedule was developed as follows:

- Measurement 1 (M1): Standard measurement. Base line (no cell phone used).
Measurement 2 (M2): Active call without BIOPRO EMF Harmoniser chip applied.
Measurement 3 (M3): Active call with BIOPRO EMF Harmoniser chip applied.

The average test measurements took approximately 5 to 7 minutes so as to negate the element of time compensation.

3. Conclusions

When tested without a cell phone (baseline state), across all individuals tested, 4.5% of their key body areas measured within the ideal performance zone, and 95.5% of the key body areas measured outside of the ideal range.

As a result of our second measurement **the influence of EMFs from cell phone resulted in a significant, measurable shift in the energy levels of the human organism** in most acupuncture points. When using a cell phone without the BIOPRO EMF Harmonisation Chip attached to it, across all individuals tested, only 2.5% of their key areas measured within the ideal performance zone. The remaining 97.5% of their key body areas were in a weakened or stressed state. This **demonstrates a significant negative effect of shifting the organism out of the healthy standard range.**

After applying the BIOPRO EMF Harmonisation Chip on the phone, across all individuals tested, 81.25% of their **key body areas measured within the ideal performance zone.** The remaining 18.75% of key body areas also showed a less stressed state when compared to both the original baseline value and the “phone call without chip” measurement. This demonstrates a **significant positive effect of shifting the organism back to healthy standard range.**

After applying the BIOPRO EMF Harmonisation Chip on the phone, all (100%) of all individuals tested had a larger percentage of key body areas within the ideal performance zone than they did when using a cell phone without BIOPRO EMF Harmonisation Chip attached to it, as well as when compared to being tested without a cell phone (baseline state).

SUMMARY		
Status	% within Optimum range	% outside Optimum range
Baseline state	4.5%	95.5%
With cellphone by itself	2.5%	97.5%
Cellphone with Biopro EMF Harmoniser	81.25%	18.75%

In summary, by comparing seven key areas of the body before and after using the BIOPRO EMF Harmoniser Chip, screening results showed that numeric stress values for all subjects were restored significantly closer to equilibrium. Each individual showed strengthened resistance to the effects of stress, and a dramatic increase in measurable energy. This in fact demonstrates the positive effect of the BIOPRO EMF Harmoniser chip.

Individual test results are shown on the following page/s.

INDIVIDUAL TEST RESULTS

Test Details:

Name of Test Subject: Tim Leitch
Date Tested: 9 October 2005
Test Location: Auckland, New Zealand
Test Equipment used: FDA-registered MSAS Professional
Credentials of Test Administrator: Doctor of Oriental Medicine, 25 years experience with performing MSAS Testing

Test Results:

Tim Leitch	Lymphatic System	Lung	Large Intestine	Nervous System	Circulation	Allergy Response	Cellular Metabolism
Baseline	20	14	17	26	18	22	17
Phone no Chip	15	14	12	21	14	20	14
Phone with BIOPRO Chip	46	36	40	45	49	50	48

Test Findings:

1. Baseline (No Phone):

When tested without a cell phone (baseline state), 0 of 7 (0%) of this individual's key body areas measured within the ideal performance zone.

2. Phone Call without BIOPRO EMF Harmonisation Chip:

When using a cell phone without the BIOPRO EMF Harmonisation Chip attached to it,
7 of 7 key body areas (100%) were in a weakened or stressed state.

3. Phone Call with BIOPRO EMF Harmonisation Chip:

After applying the BIOPRO EMF Harmonisation Chip on the phone,
all 7 key body areas (100%) showed significant improvement,

with 5 of 7 (71%) of them now measuring within the ideal performance zone.

The 6th and 7th key areas also showed a less weakened state when compared to original baseline value and the "phone call without chip" measurement.
