Hi,

Many people - women and men - are concerned about the growing numbers being affected by breast cancer. Did you know that it can be caused by exposure to EMF radiation?

You may find it useful to see significant parts of the latest information published in 2006 showing this. After all, you unwittingly allow yourself to be exposed to such risks every day.

But you needn't leave yourself exposed to these increasing risks any longer. You can now put in place the very effective bioenergy protection technology against this invisible hazard that I make available on my website <http://TimLeitch.net.nz>

State of the Evidence 2006:

What Is the Connection between your Environment and Breast Cancer?

Published by **Breast Cancer Fund** and **Breast Cancer Action**

[Abstracts from report herewith. You can download your own from www.breastcancerfund.org]
N.B. Emphasis added is mine and [One connecting phrase is my addition]

Executive Summary

"**Breast cancer rates have been climbing steadily** in the United States and other industrialized countries, amounting to more than 1,000,000 cases per year worldwide. In the United States, a woman's lifetime **risk of breast cancer has nearly tripled** during the past 4 decades.

In 2005, an estimated 211,240 U.S. women were diagnosed with invasive breast cancer and more than 58,000 women were expected to be diagnosed with one type of in-situ breast cancer, meaning the tumor is confined to its original location in the breast. In 2005, breast cancer was expected to kill more than 40,000 American women and more than 410,000 women worldwide.

The rate of new cases per year continues to inch upward in the U.S. even though billions of dollars have been spent on breast cancer research.

Less than one out of every 10 cases occurs in women born with a genetic predisposition for the disease, and as many as half of all breast cancers occur in women who have no known risk factors for the disease.

The latest 2006 State of the Evidence report demonstrates that a significant body of scientific evidence links **exposure to radiation** and synthetic chemicals to an increased risk of breast cancer. It summarises the findings of more than 350 experimental, epidemiologic and ecological studies and describes some of the ongoing controversies in breast cancer research.

The report recommends new directions for future research and includes a 10-point plan to act on the evidence and **reduce human exposure to radiation** [see below] and synthetic chemicals. This plan is **based primarily on the precautionary principle**, which in part states that indication of harm, not just proof of harm, is grounds for action.

Two decades of research on laboratory animals, wildlife and cell behavior have shown the inadequacy of the long-held belief that "the dose makes the poison". Scientists now know that the timing, duration and pattern of exposure are at least as important as the dose. **Low-dose exposure to [low frequency non-ionising radiation and] chemicals in the environment (parts per billion or even per trillion) during a critical window of an organism's development can cause permanent damage to organs and systems.**

We are all exposed to radiation and to hundreds, if not thousands, of chemicals every day of our lives, yet we know very little about the likely synergistic effects of these multiple exposures. Testing one exposure at a time for its effects ignores this reality.

Patterns of breast cancer incidence indicate the importance of environmental exposures. Women who move from countries with low breast cancer rates to industrialized countries soon acquire the higher risk of their new country.

[Following are some items from the report citing EMF radiation]

Occupational exposure to extremely low-frequency electromagnetic fields was shown to increase breast cancer risk among postmenopausal women, especially when exposure occurred before age 35. ⁷³

A cluster of **male breast cancers** was reported among a small group of men **occupationally exposed to high electromagnetic fields.** ⁷⁴

An Italian study found that truck driving was the most frequent occupation of male breast cancer patients with BRCA1 / BRCA2 mutations, possibly implicating exposure to PAHs. ⁷⁵ A review of the epidemiologic literature on male breast cancer also identifies exposure to EMFs and PAHs as risk factors. ⁷⁶

"We ignore at our peril evidence that radiation and chemicals are contributing to the growing human and economic cost of breast cancer. Halting the scourge of this disease requires that we **take action** based on existing evidence **to protect the health of people** and the planet. Waiting for absolute proof brings more needless suffering and loss of lives. It is in our power to change the course we are on. It is time to act on the evidence.

A **10-Point Plan for Reducing the Risk of Breast Cancer** and Ultimately Ending the Epidemic:

4. **Educate the public about the health effects of radiation and how to reduce exposure to both ionizing and non-ionizing radiation.**

END Abstracts of Executive Summary of report

State of the Evidence 2006: What Is the Connection between your Environment and Breast Cancer?

----- please see next page

Would you like help with information on this Point 4 of the "Plan for Reducing the Risk"?
I can provide you with very effective protection against the risk of non-ionising radiation (EMF)

Just ask yourself these questions -

- Do you regularly have a **computer in front of your chest - exposed to EMF radiation?**
- Do you **stand in front of a terminal or electronic device regularly?**
- Do you regularly have a **wire conducting a EMF radiation signal across your chest to your head** - also acting as an aerial to attract other EMF fields and signals nearby?
- Do you regularly have a **cellphone right next to your vital organs**, transmitting a microwave radiation signal every few milliseconds to register its connection with the network? **Do you put it next to your brain when you use it to communicate?**
- Do you **stand within metres of a microwave oven or other EMF radiation source?**
- What more EMF radiation are you exposed to?

Take the test on this webpage http://bioenergy.timleitch.net.nz/dangers/your_exposure.htm to see what your level of exposure may be.

The effect is measurable with a biomedical instrument - see on my website charts showing **depletion of the human biofield caused by EMF radiation**. Everyone is affected in a similar way. Depleted bioenergy means your body is not able to function at its optimal energetic state, you suffer EMF stress, compounding the effect of other daily stress, and your immune system is compromised.

My charts also show how this is remarkably **overcome with Biopro EMF Harmonisation chips** and other protection products. These all make your body's energy system more efficient and effective so **boosting your energetic capability and your immune system**. This gives you protection against extraneous invisible EMF fields and aggressive transmitted pulsed radiation signals (EMR) that you are frequently exposed to.

You can also further **improve your body's vitality** and **boost your bioenergy capability** by always **wearing a Biolife pendant** and re-energising all liquids you drink and high moisture content foods you eat with the remarkable new **Biopro Smart Card**. There are charts showing typical measurements of the benefit from these on my website, too.

You don't just have to believe me. I am happy to measure your own bioenergy should you require your own proof. Just give me a call to see what we can arrange. I recommend the use of Biopro Technology because I am convinced that really it does provide a **New Generation of Wellness** to allow you to **avoid the adverse effects of** what is growing to be **the modern global epidemic of electropollution**.

You can now protect yourself, and those you care about, from this significant health hazard that continues to grow in our increasingly technological world. **Take positive action to get this vital protection for your health and safety now.**

I look forward to helping you reduce your EMF exposure risk and protect your bioenergy.

Sincerely,

Tim Leitch
